AbstractThe review deals with drop impacts on thin liquid layers and dry surfaces. The impacts resulting in crown formation are referred to as splashing. Crowns and their propagation are discussed in detail, as well as some additional kindred, albeit nonsplashing, phenomena like drop spreading and deposition, receding (recoil), jetting, fingering, and rebound.

Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces. Stress is the average force per unit area that a ...

Die numerische Strömungsmechanik (englisch Computational Fluid Dynamics, CFD) ist eine etablierte Methode der Strömungsmechanik. Sie hat das Ziel, strömungsmechanische Probleme approximativ mit numerischen Methoden zu lösen. Die benutzten Modellgleichungen sind meist Navier-Stokes-Gleichungen, Euler-Gleichungen, Stokes-Gleichungen oder Potentialgleichungen.
