The class of Sudoku puzzles consists of a partially completed row-column grid of cells partitioned into  $N$  regions each of size  $N$  cells, to be filled in ("solved") using a prescribed set of  $N$  distinct symbols (typically the numbers  $\{1, \dots, N\}$ ), so that each row, column and region contains exactly one of each element of the set. The properties of Sudoku puzzles and their solutions can be ...

A tree is a mathematical structure that can be viewed as either a graph or as a data structure. The two views are equivalent, since a tree data structure contains not only a set of elements, but also connections between elements, giving a tree graph. Trees were first studied by Cayley (1857). McKay maintains a database of trees up to 18 vertices, and Royle maintains one up to 20 vertices.
