

organelles pdf

In cell biology, an organelle is a specialized subunit within a cell that has a specific function. Individual organelles are separately enclosed within their own lipid bilayers. The name organelle comes from the idea that these structures are parts of cells, as organs are to the body, hence organelle, the suffix -elle being a diminutive. Organelles are identified by microscopy, and can also be ...

Organelle - Wikipedia

Leucoplasts (from the Greek *leukos* "white", and *plastis* "formed, molded") are a category of plastid and as such are organelles found in plant cells. They are non-pigmented, in contrast to other plastids such as the chloroplast. Lacking photosynthetic pigments, leucoplasts are not green and are located in non-photosynthetic tissues of plants, such as roots, bulbs and seeds.

1 Plasmodium Life Cycle The malaria parasite exhibits a complex life cycle involving an insect vector (mosquito) and a vertebrate host (human). Four Plasmodium species infect humans: *P. falciparum*, *P. vivax*, *P. ovale* and *P. malariae*. All four species exhibit a similar life cycle with only minor variations.

Il reticolo endoplasmatico "r" presente in tutte le cellule eucariote, sia animali che vegetali. La funzione primaria del reticolo endoplasmatico "r" quella di effettuare la sintesi dei lipidi o delle proteine che devono essere inviate all'esterno o in altri compartimenti organelli cellulari. Il suo secondo scopo "r" quello di dividere la cellula in compartimenti: infatti spesso nel citosol avvengono ...
