oscillation theory for second pdf

Neutrino oscillation is a quantum mechanical phenomenon whereby a neutrino created with a specific lepton family number ("lepton flavor": electron, muon, or tau) can later be measured to have a different lepton family number. The probability of measuring a particular flavor for a neutrino varies between 3 known states, as it propagates through space.

A neutrino (ν or $\bar{\nu}$) (denoted by the Greek letter ν) is a fermion (an elementary particle with half-integer spin) that interacts only via the weak subatomic force and gravity. The mass of the neutrino is much smaller than that of the other known elementary particles. Although only differences of squares of the three mass values are known as of ...

CAS consists of agents (e.g., cells, species, social actors, firms, and nations) assumed to follow certain behavioral schemata. Second, as no central control directs the behavior of agents, self-organization occurs when agents are acting on locally available information about the behavior of other

This post, the latest in my series about cosmology, the study of the origin and evolution of the Universe as a whole, talks about the Steady State theory. This is an elegant alternative theory to the Big Bang, which was very popular among astronomers in the 1950s, although it has now been discarded. What is the Steady
