

parameterized and exact computation pdf

The present code is an implementation of MonadPlus and the MonadPlus transformer with fair conjunctions and disjunctions and with distinct good termination properties. This implementation terminates whereas more conventional MonadPlus realizations (e.g., the List monad) diverge. Here's an example ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

In mathematics, Newton's identities, also known as the Newton–Girard formulae, give relations between two types of symmetric polynomials, namely between power sums and elementary symmetric polynomials. Evaluated at the roots of a monic polynomial P in one variable, they allow expressing the sums of the k -th powers of all roots of P (counted with their multiplicity) in terms of the ...

Asymptotic Relative Efficiency in Estimation

In mathematics and computer science, an algorithm (/ ɛː ˈ ɔː l ɪ ˈ ɡ ɔː r ɪ ˈ ɛ ɪ ˈ ɒ ː ˈ ɒ ː m / ()) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing, and automated reasoning tasks.. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a function.

ABSTRACT: Policy iteration (PI) is a recursive process of policy evaluation and improvement to solve an optimal decision-making, e.g., reinforcement learning (RL) or optimal control problem and has served as the fundamental to develop RL methods.

Analogy of images as high-dimensional points. Since the images are stretched into high-dimensional column vectors, we can interpret each image as a single point in this space (e.g. each image in CIFAR-10 is a point in 3072-dimensional space of 32x32x3 pixels).

CS231n Convolutional Neural Networks for Visual Recognition

This blog post looks at variants of gradient descent and the algorithms that are commonly used to optimize them.
