A plasma display panel (PDP) is a type of flat panel display that uses small cells containing plasma; ionized gas that responds to electric fields.. Until about 2007, plasma displays were commonly used in larger televisions (30 inches (76 cm) and larger). Since then, they have lost nearly all market share due to competition from low-cost LCD displays and more expensive but high-contrast OLED ...

Plasma stealth is a proposed process to use ionized gas to reduce the radar cross-section (RCS) of an aircraft. Interactions between electromagnetic radiation and ionized gas have been extensively studied for many purposes, including concealing aircraft from radar as stealth technology. Various methods might plausibly be able to form a layer or cloud of plasma around a vehicle to deflect or ...

Owing to its wide (3.4 eV) and direct-tunable band gap, gallium nitride (GaN) is an excellent material platform for UV photodetectors. GaN is also stable in radiation-rich and high-temperature environments, which makes photodetectors fabricated using this material useful for in-situ flame detection and combustion monitoring.

The Administrative Committee of the NPSS facilitates all of the activities of the society. The first activity of record in this field was the formation of a Nuclear Studies Committee in the IRE in 1947 to determine the proper role of the IRE in this new technical field.
