$N|2$  at any time  $t$ . Because of this, Bohmian Mechanics agrees with all predictions made by orthodox quantum mechanics whenever the latter are unambiguous [2, 3]. Hydrodynamic Formulation of Bohmian Mechanics. Write  $\psi$  in the Euler form  $\psi(x,t) = R(x,t)e^{iS(x,t)}$  where  $R$  and  $S$  are given by real-valued functions.

The analytical approach to quantum trajectories 1. (The traditional viewpoint) Given a pre-computed wave function, compute the velocity from the action function, then compute the trajectory. 2. A new viewpoint: Given a sequence of (experimental or computed) slices of the density for a series of time steps, compute the quantum trajectories.
